

Just as not all stainless steel grades are created equal, neither are stainless steel tubing suppliers.

STAINLESS STEEL TUBING

The Most Versatile Metal Used in Manufacturing

ABOUT US

Founded in 1982, **Eagle Stainless Tube & Fabrication** has been a trusted leader in precision stainless steel tubing for over four decades. We specialize in high-quality, small-diameter tubing solutions for the **medical, aerospace, and industrial industries**, delivering unmatched precision and reliability.

Distribution: Supplying high-quality stainless steel tubing in a variety of sizes, alloys, and finishes to meet industry demands.

Precision Cut-to-Length Tubing: High-quality stainless steel tubing cut to exact specifications with tight tolerances, burr-free, and no work hardening

Custom-Fabricated Components: Precision bending, coiling, machining, and forming of small-diameter tubing to meet specialized design and performance requirements.

WHY CHOOSE EAGLE STAINLESS?

- ✓ **Unmatched Precision & Quality** – Tight tolerances and industry-leading standards ensure superior performance. ISO 9001 & ISO 13485
- ✓ **Custom Solutions** – From cut-to-length tubing to complex fabrication, tailored to customer specifications.
- ✓ **Reliable Expertise** – 40+ years of experience delivering high-performance tubing.
- ✓ **Commitment to Excellence** – Precision, quality, and customer satisfaction drive everything we do.

300 Series Stainless Steel Tubing

300 series stainless steel tubing is known for its corrosion resistance, strength, and durability, making it ideal for critical applications. Common grades like 304 and 316 offer excellent performance in medical, aerospace, and industrial environments. Its precision, reliability, and biocompatibility ensure superior performance in demanding conditions.

Quality ISO 9001 & ISO 13485

These certifications reinforce our dedication to delivering reliable, high-performance stainless steel tubing for critical applications. These certifications play a crucial role, making them indispensable for industries where precision, safety and consistency are paramount.

Ordering Tubing

Stainless Steel is generally ordered to outside diameter (OD) and wall thickness. Tubing has 3 dimensions: OD, inside diameter (ID) and wall thickness. Only two can be specified with tolerances. The 3rd is theoretical. Other things to consider: alloy, temper or hardness, welded or seamless tubing, length, surface finish, straightness and cleanliness.
